Interventions to Reduce Bullying and Cyberbullying

Victimology and Victim Assistance

Cyberbullying at University in International Contexts
2005. Cyberbullying: From theory to intervention aims to make clear and practical sense of this proliferation of coverage by defining the problem of cyberbullying and examining its unique features. The volume provides a thorough overview of state-of-the-art research into the phenomenon, and discusses the development and evaluation of interventions to prevent and combat it. Whereas most research papers offer limited space to describe actual intervention methods, this book provides tremendous insight into the different theoretical methods and practical strategies available to combat cyberbullying. Part One provides readers with a critical review of the existing research literature and collects insights from international researchers involved in bullying and cyberbullying research, tackling key questions such as: how is cyberbullying defined, what is the overlap with traditional bullying, and what are the negative consequences of cyberbullying? Part Two gives an overview of the development and content of evidence-based ICT interventions aimed at preventing and combating bullying and cyberbullying. In addition, some of the important outcomes of the effect evaluations will be described. The book's final chapter integrates the information from Part One with advice regarding practical applications from Part Two. Cyberbullying: From theory to intervention is essential reading for academics and researchers concerned with both cyberbullying and traditional bullying. It can be used in graduate seminars or advanced undergraduate courses in cyberbullying and will also be of interest to teachers, field experts and organisations involved and disseminating cyberbullying solutions.

Cyber Kids, Cyber Bullying, Cyber Balance

This book brings together an international group of experts to present the latest psychosocial and developmental criminological research on cyberbullying, cybervictimization and intervention. With contributions from experts in European countries, including Cyprus, Greece, Ireland, Italy, France, Hungary, Spain, and the United Kingdom, as well as from Canada and the USA, this authoritative volume explores the nature, risk factors, and prevalence of cyberbullying among children and adolescents. A particularly original focus is directed towards the Tabby project (Threat Assessment of online Bullying Behaviour among Youngsters), an intervention programme based on the threat and risk assessment approach which seeks to prevent the occurrence of violence and its recidivism. Presenting cutting-edge research on developmental criminology and legal psychology, International Perspectives on Cyberbullying is a comprehensive resource for practitioners, teachers, parents, and researchers, as well as scholars of criminology, psychology, and education.

Cyber Behavior: Concepts, Methodologies, Tools, and Applications

"This dissertation comprises five chapters, and it is an article-based format that studies teachers' needs and characteristics regarding bullying intervention. It is divided into two phases that are explained through the different chapters. Chapter One explains the problem's overall background and provides an introduction to the three papers presented in the next chapters. Chapter Two presents the First Phase of the dissertation, which provided information about teachers' knowledge, concerns, and practice regarding bullying. Findings demonstrate that Idaho education professionals need training and resources to help them intervene appropriately, especially with cyberbullying. Chapter Three focuses on the following potential teachers' characteristics affecting their likelihood of intervention: Perceived seriousness of the bullying situation, empathy towards victim, and self-efficacy to influence misbehaviors. The findings regarding this last characteristic have been controversial since different studies found contrast findings regarding its significance influencing teachers' likelihood of intervention. The current research found that the seriousness and empathy were predictors for teachers' intervention in both in-person bullying and cyberbullying in Idaho and the Basque Country, but teachers' self-efficacy does not predict teachers' intervention. Chapter Four introduces a new characteristic: teachers' sexism, which appears to be a negative component for the bullying intervention. The higher the sexist attitude, the less bullying intervention. Finally, Chapter Five summarizes the three articles presented in this dissertation and provides overall conclusions."--Boise State University ScholarWorks.

Bullying, Cyberbullying and Student Well-Being in Schools

"The purpose of this research project was to examine resources that can be useful in preventing cyberbullying within the community and school system. Through using an Action Research Method, my intent was to engage key stakeholders and agencies to strategize remedies surrounding cyberbullying behavior. Further, this project has explored ways to reduce risks of cyberbullying by developing partnerships within local communities and the school systems as a concerted effort to prevent threats and the execution of threats towards those victimized. Additionally, we have examined the aggressive behavior associated with cyberbullying. Conducting such an analysis would inform the types of intervention required to address the root causes of cyber bullying and thereby circumvent through intervention. This investigatory research would help to mitigate bullying behavior by determining probable causality. One potential outcome was the development of infrastructures that would serve as safeguards to prevent the execution of life threatening occurrences involving local schools, police departments and special interest groups. The intent of this project was to educate the community by broadening the awareness of cyberbullying and building stronger community relations."--Abstract, p. 1.

Technology and Adolescent Health

Between adolescence and adulthood, individuals begin to explore themselves mentally and emotionally in an attempt to figure out who they are and where they fit in society. Social technologies in the modern age have ushered in an era where these evolving adolescents must circumvent the negative pressures of online influences while also still trying to learn how to be utterly independent. Recent Advances in Digital
Media Impacts on Identity, Sexuality, and Relationships is a collection of critical reference materials that provides imperative research on identity exploration in emerging adults and examines how digital media is used to help explore and develop one's identity. While highlighting topics such as mobile addiction, online intimacy, and cyber aggression, this publication explores a crucial developmental period in the human lifespan and how digital media hinders (or helps) maturing adults navigate life. This book is ideally designed for therapists, psychologists, sociologists, psychiatrists, researchers, educators, academicians, and professionals.

Recent Advances in Digital Media Impacts on Identity, Sexuality, and Relationships

Essentials of Occupational Health Psychology provides a thorough overview of Occupational Health Psychology (OHP) with a focus on empowering readers to take appropriate and reasoned action to address a wide variety of worker health, safety, and well-being challenges that are present in working situations all over the world. Although relatively new as an area of specialization, OHP research and intervention efforts are already having major impacts on the way work is done around the world. Each of the twelve chapters in Essentials of Occupational Health Psychology addresses an essential aspect of OHP, with a consistent emphasis on putting what is known about that area into practice. Topics include essential background information regarding the history of OHP and major areas of OHP research and practice, such as work-related stress and recovery, psychological and physical demands and resources, interpersonal mistreatment, work and nonwork role dynamics, and safety. Each chapter features a discussion of why these topics are important to workers and organizations, as well as pertinent evaluation and/or intervention recommendations to help readers better understand what they can do to improve worker health, safety, and well-being, and how to convince others of the value of such efforts. Additional supplements within each chapter include a set of targeted learning objectives to help structure student reading and in-class discussion, focused discussion questions, pertinent media resources to provide current examples of these topics, and professional profiles based on interviews conducted by the authors with fourteen well-known and widely respected OHP researchers and practitioners. Essentials of Occupational Health Psychology is valuable to graduate and advanced undergraduate students as well as working professionals who are interested in learning how to manage work environments that support worker health, safety, and well-being. The chapters in this text could also provide supplemental reading for training and development workshops for professionals in related disciplines who could benefit from a better understanding of the psychology associated with work experiences.

Violence and Society: Breakthroughs in Research and Practice

Mental Health and Wellbeing through Schools brings together international experts from various disciplines to identify and address a range of current challenges in this rapidly-developing field of endeavour. The opening chapter details lessons learned from research and practice, outlining some emerging challenges for the effective implementation of mental health initiatives in schools. Subsequent chapters take up the various issues, exploring problems and proposing solutions. Topics fall within four broad areas: Organisational and leadership issues such as dealing with 'wicked' or 'hard-to-tame' (complex and resistant) problems and taking a broad public health approach; Teacher-related issues, such as how to integrate programs successfully into schools, and teacher skills and professional learning; The challenges and opportunities of new technologies, including cyberbullying and the use of online, multimedia and mobile resources for both student and teacher learning and support; The need for a greater focus on targeted interventions for at-risk students, such as those with disabilities; also addressing 'hard-to-tame' problems such as bullying, youth suicide and depression. Mental Health and Wellbeing through Schools will be of interest to those involved in researching, developing, evaluating and implementing mental health initiatives in schools, including academics, practitioners, educators and educational and Mental Health policy makers. It will also be of use to professionals, such as nurses and social workers, concerned with the wellbeing of children and adolescents. The book will have international appeal, with contributors from around the world, experienced in a range of contexts. Rosalyn H. Shute is Adjunct Professor of Psychology at both Flinders and Federation Universities (Australia). Her research expertise lies broadly in clinical child psychology and paediatric psychology/child health and wellbeing. She is an experienced teacher of Developmental Psychology, educational and clinical child/paediatric psychology. Phillip T. Slee is a Professor in Human Development in the School of Education at Flinders University, Adelaide, Australia. He is a trained teacher and researcher. His research interests include childhood of illness experience, mental health and wellbeing, stress and teacher education. He has a particular interest in the practical and policy implications of his research. He and Shute recently co-authored Child Development: Theories and Critical Perspectives.

Narratives in Research and Interventions on Cyberbullying among Young People

Psychologists explore the reality of cyberbullies. Millions of children are affected by bullies each year. Advances in social media, email, instant messaging, and cell phones, however, have moved bullying from a schoolyard fear to a constant threat. The second edition of Cyberbullying offers the most current information on this constantly-evolving issue and outlines the unique concerns and challenges it raises for children, parents, and educators. Authorized by psychologists who are internationally recognized as experts in this field, the text uses the latest research in this area to provide an updated, reliable text ideal for parents and educators concerned about the cyberbullying phenomenon.

Principles of Cyberbullying Research
This book presents the information from the collaborative efforts and perspectives of a current school district superintendent who has researched and worked day-to-day with the issues, and an attorney currently dealing with the legal issues relevant to cyberbullying. This book is helpful to students, parents, educators, mental and medical health professionals, and attorneys who work with the misery, fears, terror and other consequences of cyberbullying in social media.

Handbook of Research on Individualism and Identity in the Globalized Digital Age

This book describes innovative ways to do research about, and design interventions for, cyberbullying by children and adolescents. It does this by taking a narrative approach. How can narrative research methods complement the mostly quantitative methods (e.g. surveys, experiments, .) in cyberbullying research? And how can stories be used to inform young people about the issue and empower them? Throughout the book, special attention is paid to new information and communication technologies, and the opportunities ICTs provide for narrative research (e.g. as a source of naturally occurring stories on cyberbullying), and for narrative health interventions (e.g. via Influencers). The book thus integrates research and insights from the fields of cyberbullying, narrative methods, narrative health communication, and new information and communication technologies.

Reducing Cyberbullying in Schools

Cyberbullying

Following the migration of workflows, data, and communication to the Cloud and other Internet-based frameworks, interaction over the Web has become ever more commonplace. As with any social situation, there are rules and consequences to actions within a virtual environment. Cyber Behavior: Concepts, Methodologies, Tools, and Applications explores the role of cyberspace in modern communication and interaction, including considerations of ethics, crime, security, and education. With chapters on a variety of topics and concerns inherent to a contemporary networked society, this multi-volume work will be of particular interest to students and academicians, as well as software developers, computer scientists, and specialists in the field of Information Technologies.

International Perspectives on Cyberbullying

Though decades ago school shootings were rare events, today they are becoming normalized. Active shooter drills have become more commonplace as pressure is placed on schools and law enforcement to prevent the next attack. Yet others argue the traumatizing effects of such exercises on the students. Additionally, violence between students continues to remain problematic as bullying pervades children’s lives both at school and at home, leading to negative mental health impacts and, in extreme cases, suicide. Establishing safer school policies, promoting violence prevention programs, building healthier classroom environments, and providing better staff training are all vital for protecting students physically and mentally. The Research Anthology on School Shootings, Peer Victimization, and Solutions for Building Safer Educational Institutions examines the current sources of violence within educational systems, and it offers solutions on how to provide a safer space for both students and educators alike. Broken into four sections, the book examines the causes and impacts that peer victimization has on students and how this can lead to further violence and investigates strategies for detecting the warning signs. The book provides solutions that range from policies and programs that can be established to strategies for teaching nonviolence and promoting coexistence in the classroom. Highlighting a range of topics such as violence prevention, school climate, and bullying, this publication is an ideal reference source for school administrators, law enforcement, teachers, government and state officials, school boards, academicians, researchers, and upper-level students who are intent on stopping the persisting and unfortunate problem that is school violence.

Cyberpsychology

Cyberbullying is a problem that is being increasingly investigated by researchers, however, much of the cyberbullying research literature to date has focused on children and youth. Cyberbullying at University in International Contexts fills the gap in the research literature by examining the nature, extent, impacts, proposed solutions, and policy and practice considerations of bullying in the cyber-world at post-secondary institutions, where reports of serious cyberbullying incidents have become more prevalent. This book brings together cutting-edge research from around the world to examine the issue of cyberbullying through a multi-disciplinary lens, offering an array of approaches, interpretations, and solutions. It is not solely focused on cyberbullying by and against students, but also includes cyberbullying by and against faculty members, and permutations involving both students and faculty, as well as institutional staff, presenting perspectives from students, practitioners and senior university policy makers. It draws on research from education, criminology, psychology, sociology, communications, law, health sciences, social work, humanities, labour studies and is valuable reading for graduate students in these fields. It is also essential reading for policymakers, practitioners and University administrators who recognize their responsibility to provide a healthy workplace for their staff, as well as a safe and respectful environment for their students.

Essentials of Occupational Health Psychology

This book highlights cyber racism as an ever growing contemporary phenomenon. Its scope and impact...
reveals how the internet has escaped national governments, while its expansion is fuelling the spread of non-state actors. School bullying and cyberbullying are widely recognized as an international problem, but publications have focused on the western tradition of research. In India, recognition of these issues and research on the topics have been emerging in recent years. Beginning with cross-cultural differences across Indian, European and Australian contexts, this volume provides direct empirical comparisons between western and Indian situations. It then discusses innovative ways of hearing the views of students, pre-service teachers and teachers, featuring a range of qualitative and quantitative methodologies. The concluding commentaries from North American investigators provide a further international perspective from another region where much progress in researching these areas has been made. Together this ground-breaking collection comprises contributions from four continents on the prevalent issues of bullying, cyberbullying and student well-being.

School Bullying

In 2010, the International Cyberbullying Think Tank was held in order to discuss questions of definition, measurement, and methodologies related to cyberbullying research. The attendees' goal was to develop a
set of guidelines that current and future researchers could use to improve the quality of their research and advance our understanding of cyberbullying and related issues. This book is the product of their meetings, and is the first volume to provide researchers with a clear set of principles to inform their work on cyberbullying. The contributing authors, all participants in the Think Tank, review the existing research and theoretical frameworks of cyberbullying before exploring topics such as questions of methodology, sampling issues, methods employed so far, psychometric issues that must be considered, ethical considerations, and implications for prevention and intervention efforts. Researchers as well as practitioners seeking information to inform their prevention and intervention programs will find this to be a timely and essential resource.

Cyberbullying in the Global Playground

This book brings together the most current thinking and research on educator stress and how education systems can support quality teachers and quality education. It adopts an occupational health perspective to examine the problem of educator stress and presents theory-driven intervention strategies to reduce stress load and support educator resilience and healthy school organizations. The book provides an international perspective on key challenges facing educators such as teacher stress, teacher retention, training effective teachers, teacher accountability, cyber-bullying in schools, and developing healthy school systems. Divided into four parts, the book starts out by introducing and defining the problem of educator stress internationally and examining educator stress in the context of school, education system, and education policy factors. Part I includes chapters on educator mental health and well-being, stress-related biological vulnerabilities, the relation of stress to teaching self-efficacy, turnover in charter schools, and the role of culture in educator stress. Part II reviews the main conceptual models that explain educator stress while applying an occupational health framework to education contexts which stresses the role of organizational factors, including work organization and work practices. It ends with a proposal of a dynamic integrative theory of educator stress, which highlights the changing nature of educator stress with time and context. Part III starts with the definition of what constitute healthy school organizations as a backdrop to the following chapters which review the application of occupational health psychology theories and intervention approaches to reducing educator stress, promoting teacher resources and developing healthy school systems. Chapters include interventions at the individual, individual-organizational interface and organizational levels. Part III ends with a chapter addressing cyber-bullying, a new challenge affecting schools and teachers. Part IV discusses the implications for research, practice and policy in education, including teacher training and development. In addition, it presents a review of methodological issues facing researchers on educator stress and identifies future trends for research on this topic, including the use of ecological momentary assessment in educator stress research. The editors' concluding comments reflect upon the application of an occupational health perspective to advance research, practice and policy directed at reducing stress in educators, and promoting teacher and school well-being.

Encyclopedia of Information Science and Technology, Fifth Edition

Bullying has long been tolerated as a rite of passage among children and adolescents. There is an implication that individuals who are bullied must have “asked for” this type of treatment, or deserved it. Sometimes, even the child who is bullied begins to internalize this idea. For many years, there has been a general acceptance and collective shrug when it comes to a child or adolescent with greater social capital or power pushing around a child perceived as subordinate. But bullying is not developmentally appropriate; it should not be considered a normal part of the typical social grouping that occurs throughout a child’s life. Although bullying behavior endures through generations, the milieu is changing. Historically, bullying has occurred at school, the physical setting in which most of childhood is centered and the primary source for peer group formation. In recent years, however, the physical setting is not the only place bullying is occurring. Technology allows for an entirely new type of digital electronic aggression, cyberbullying, which takes place through chat rooms, instant messaging, social media, and other forms of digital electronic communication. Composition of peer groups, shifting
demographics, changing societal norms, and modern technology are contextual factors that must be considered to understand and effectively react to bullying in the United States. Youth are embedded in multiple contexts and each of these contexts interacts with individual characteristics of youth in ways that either exacerbate or attenuate the association between these individual characteristics and bullying perpetration or victimization. Recognizing that bullying behavior is a major public health problem that demands the concerted and coordinated time and attention of parents, educators and school administrators, health care providers, policy makers, families, and others concerned with the care of children, this report evaluates the state of the science on biological and psychosocial consequences of peer victimization and the risk and protective factors that either increase or decrease peer victimization behavior and consequences.
